

Invitation to Seminar Talk

Metropolis dynamics of mean-field spin glasses

Jiří Černý

Faculty of Mathematics, University of Vienna

Host: Laszlo Erdős

Dynamics of spin glasses has many interesting properties like aging and long-time memory. Rigorous understanding of these properties in the context of Markovian dynamics of mean-field spin-glass models saw considerable progress in the last decade, but mostly for rather simplistic transition rules. In my presentation, I describe recent steps in understanding physically more interesting dynamics.

This is joint work with Tobias Wassmer.

Thursday, 19 February 2015, 4:00pm
Mondi2, Central Building, 1st floor

2015-02-19

This invitation is valid as a ticket for the IST Shuttle from and to Heiligenstadt Station. Please find a schedule of the IST Shuttle on our webpage (note that the IST Shuttle times are highlighted in dark green):

http://ist.ac.at/fileadmin/user_upload/pdfs/IST_shuttle_bus.pdf

The IST Shuttle bus is marked IST Shuttle and has the Institute Logo printed on the side.
