

Staff Scientist - Superconducting circuits for quantum technologies

Full Time (40h/w) – Limited for 5 years (permanent contract possible after tenure-like evaluation)

Klosterneuburg (Vienna), Austria

€ 65,000* gross/year

IST Austria is growing. Grow with us!

IST Austria is a growing international institute for conducting frontier research in mathematics, computer science, and the life and physical sciences. We recruit passionate professionals from all over the world and from all fields who support our goals of excellence in research and science management. Located on a beautiful campus on the outskirts of Vienna, we offer numerous opportunities for personal growth in a stable working environment. [Get an insight!](#)

Your responsibilities

Staff Scientists at IST Austria pursue research projects together with professors, serving as collaborators with expertise normally not present within research groups. We are looking for a Staff Scientist with experience in nanofabrication and measurements of superconducting circuits for quantum technologies. The staff scientist will be associated with the Nanofabrication facility, which provides technical support for research groups on campus. The staff scientist with experience in quantum physics and quantum technologies should have an active interest in the fabrication of superconducting circuits, low temperature physics and device measurements (DC, microwave).

- Develop recipes for novel superconducting circuit devices and participate in their characterization. Potential projects could relate to their integration with semiconductors, realization of magnetic field resilient resonators, loss mitigation with better designs, interfaces and materials and the development of flip chip technology.
- Guarantee a smooth operation of the electron beam lithography system
- Keep the fabrication knowledge in-house and transfer this knowledge to new group members

Your profile

- PhD in physics, applied physics, electrical engineering or material science. Preferably >2 years post-graduate experience in a demanding and high-level research environment
- Expertise in electron beam lithography, ideally with the Raith EBPG system >1 year
- A successful research track record, preferably in one of the top groups of the field
- Excellent command of English
- Team player with outstanding communication skills
- Experience with low temperature DC and RF measurement
- In addition, the following skills would be most welcome:
Experience with Python and other programming languages
